11/14/2022

Implemented .ejs pages for our website

- Home Page
- Login/Register Page
 - Which redirects you to log in to Spotify
- Mixify Page
- Prospects Page

Database Implementation

- Now we add users to the database and have worked on sending the database query results to the prospects page.
- Spotify userID and display name are now stored in the database and can be used on the .ejs pages

Mixify Page

- Made the Mixify button functional and finished the Mixify post request

Results Page

- After hitting the mix button, it now displays the query results for a mix as cards for each song

Prospects Page

- Added the add/remove friends feature and connected it to the backend

Database Implementation

- Added feature that improves user's songs into the database

Added a separate page called "Register with Spotify" that is displayed on the navigation bar, in the case the user does not have a Spotify account already.

Code is completed, need to deploy and test.
