Prospects Page

The screenshot shows a web application titled "Add Friends". It has two main sections: "Current Friends" and "Prospective Friends". Each section contains a table-like structure with columns for "Name", "Profile Pic", and a "Remove Friend Button" or "Add Friend Button". A small modal window is centered on the screen, displaying three green stars.

Database

Now we add users to the database and have worked on sending the database query results to the prospects page.

Spotify userID and display name are now stored in the database and can be used on the .ejs pages
