Deliverables for this weekly meeting with Nikita:

Meeting link: https://cuboulder.zoom.us/j/6808546254

What have you done since the last meeting?
We have working .ejs files for our website
Started to work on the database, and now we add users to the database and have worked on sending the database query results to the prospects page.

What are the challenges you are facing?
We all had a busy week with other CS classes, so we could not put all our focus into this project as the other week.

What are the features you are planning to implement this week?
We plan to have a full-functioning database
Uploading our site to the cloud server
Clean up some of our .ejs pages if we have the time, but the database is the main focus

Week 3 - Application server
At the latest, in this week you should have your server implemented. Your UI should be able to communicate with the Database. You should be able to perform CRUD operations on the database.

Meeting with Nikita:

Minutes of Meeting: 3:30 pm - 3:46 pm

Fix Release Notes!!!
We need to complete the entire project by Monday after fall break (November 29th)
final presentation is on the Friday after fall break

Talked about issues with the implementation of our database, and walked us through how to do it

Maybe add a Register Page?

Team Meeting: Tuesday

Minutes of Meeting: 4:00 pm - 4:49 pm

Decisions made:
Updated Release Notes
Working on adding songs to the database / index.js
Updating prospects.ejs with database

Alternative actions/options discussed:
Signed up for a Class Project Presentation Slot - During Recitation at 1:25 pm

Team Meeting: Thursday

Minutes of Meeting: 4:15 pm -

Decisions made:
Got to start on pulling the songs from Spotify
Work on the prospects page
Made a new branch Mixify display and put in example data for the songs and wrote a SQL query
to do what Mixify is supposed to do and return the song
added functionalities to the logout page
